(54) Title: EPICUTANEOUS TEST PLASTER

(57) Abstract: An epicutaneous test plaster, which is intended for removable adhesion to a skin portion of a person subjected to testing, has a flexible carrier (10) with a medical adhesive layer (12) and a number of test chambers (31). The test chambers contain a filter element (17) for absorption of allergen and are oriented with their opening directed away from the flexible carrier (10). A removable cover layer (27, 32) extends over all the test chambers and the carrier (10) and is removably secured to them by means of the adhesive layer (12) of the carrier. According to the invention, the test chambers (31) are formed as separate chambers, which are each separately fixed to the carrier and which are made up of a number of different sub-layers (13, 17, 19, 20, 24, 26).
